DEPARTMENT OF MICROBIOLOGY

June 16th, 1958

Dear Josh,

As I mentioned to you we are interested in getting O strains and their motile mutants. Such strains should lend themselves very well for immunological analysis we have in mind. We are especially interested in your SW534, SW533, SL28 and their motile mutants, and any others that you may have handy. We are also very much interested in your SW578 and SW580. Could I ask you to send these cultures to Dr. Merwin Moskowitz, Stanley Coulter Hall, Purdue University, West Lafayette, Indiana? I should be most grateful.

The data on the  $\text{AmSO}_4$  method that I mentioned to you are in the note book of my assistant, who at the moment is cruising the seas for Uncle Sam. He should be back shortly, and I shall ask him about the details then.

I enjoyed the Rutgers meeting, because the atmosphere was pleasant and the papers on the whole very satisfactory. To me your paper stood out as the best of the whole group. No flattery intended.

Best regards to you and Esther.

PS I am going to be in Cleveland until end of July. However, a new student coming in would benefit from your collection early in July.

*Heffner*
